The life of the ocean is very interesting. Sea water is full of millions of tiny plants, and fishes. The largest sea animal is the whale, which is the giant of the animal world today. Its tail is so powerful that with a single blow it can destroy a large boat. The sperm whales and white whales may be from fifty to seventy feet long and there are still larger. The blue whale reaches a length of ninety feet with a weight approaching seventy tons. Very few are found in these days except in the South Seas. They are warm blooded they feed their babies as land mammals do. The whale is suited to live in water. It is shaped like a submarine boat, with a tail turned into a power paddle. It has flip on its sides to keep it balanced and layers of fat or oil under the skin called blubber, which furnishes heat and makes the huge body light and buoyant.
