**Q-7 A** Read the passage and answer the following questions. Q.1 carries 2 marks and Q.2 to Q.5 carry 1 mark each. **(06)**

Living things adapt to their environment so they can survive. An organism adapts when it develops a behavior that makes it more likely to survive. It can behavior that makes it more likely to survive. It can behavior also adapt by forming a physical characteristic or body part that helps it survive.

In a forest biome, some trees grow taller than the other plants around them. This lets them reach the sunlight. Growing taller is an adaptation that helps trees survive. Shorter plants have adapted with their behavior. They have learned to live in the shade with less sunlight.

Animals in the forest have a wide variety of adaptations. Monkeys have long tails. They can use them almost like another hand. This helps them swing quickly through the tops of trees. They can even do this while holding their babies or gathering food. Giraffes need to reach leaves at the tops of tall trees. Having a long neck is an adaptation that allows them to do this.

Some animals’ adaptations prevent other animals from wanting to eat them. A skunk’s horrible smell makes larger animals choose something else to eat. Even plants sometimes protect themselves in this way. Roses and acacia trees both have dangerous thorns. The thorns prevent animals from eating their leaves.

Answer the following questions based on the reading passage.

1. What are the two main ways that an organism adapts?
2. What is one animal adaptation you read about in the passage?

3. Is the animal adaptation you chose a physical or behavioral adaptation?
4. What is one plant adaptation you read about in the passage?
5. Is the plant adaptation you chose a physical or behavioral adaptation?

**B** Write short notes on: **(08)**  
1. The Language of Science
