

# C.U.SHAH UNIVERSITY

## Winter Examination-2018

**Subject Name : Design and Analysis of Algorithms**

**Subject Code : 4TE05DAA1**

**Branch: B.Tech (CE,IT)**

**Semester : 5**

**Date : 03/12/2018**

**Time : 10:30 To 01:30**

**Marks : 70**

Instructions:

- (1) Use of Programmable calculator & any other electronic instrument is prohibited.
- (2) Instructions written on main answer book are strictly to be obeyed.
- (3) Draw neat diagrams and figures (if necessary) at right places.
- (4) Assume suitable data if needed.

**Q-1 Attempt the following questions:**

- |            |                                                                                         |             |
|------------|-----------------------------------------------------------------------------------------|-------------|
| <b>(a)</b> | Define Algorithm.                                                                       | <b>(01)</b> |
| <b>(b)</b> | Write best case and worst case time complexity of binary search.                        | <b>(01)</b> |
| <b>(c)</b> | Define Big-Omega asymptotic notation.                                                   | <b>(01)</b> |
| <b>(d)</b> | Define feasible solution.                                                               | <b>(01)</b> |
| <b>(e)</b> | State principle of optimality.                                                          | <b>(01)</b> |
| <b>(f)</b> | Define directed acyclic graph.                                                          | <b>(01)</b> |
| <b>(g)</b> | Write best case and worst case time complexity of merge sort.                           | <b>(01)</b> |
| <b>(h)</b> | Define memoization.                                                                     | <b>(01)</b> |
| <b>(i)</b> | Differentiate: Longest common subsequence problem and longest common substring problem. | <b>(01)</b> |
| <b>(j)</b> | Define Minimum Spanning Tree.                                                           | <b>(01)</b> |
| <b>(k)</b> | List methods for solving recurrences.                                                   | <b>(01)</b> |
| <b>(l)</b> | Write best case and worst case time complexity of quick sort.                           | <b>(01)</b> |
| <b>(m)</b> | List algorithms for string matching.                                                    | <b>(01)</b> |
| <b>(n)</b> | Give the example that solved in polynomial time.                                        | <b>(01)</b> |

**Attempt any four questions from Q-2 to Q-8**

- |            |                                                                                                                                                                                          |             |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Q-2</b> | <b>(a)</b> Explain key characteristics of an algorithm.                                                                                                                                  | <b>(03)</b> |
|            | <b>(b)</b> Prove or disprove that $f(n) = 1 + 2 + 3 + \dots + n \in \Theta(n^2)$ .                                                                                                       | <b>(04)</b> |
|            | <b>(c)</b> Why amortized analysis is required? Explain any two method of amortized analysis with suitable example.                                                                       | <b>(07)</b> |
| <b>Q-3</b> | <b>(a)</b> Differentiate: Divide & Conquer method and Dynamic Programming method.                                                                                                        | <b>(03)</b> |
|            | <b>(b)</b> Solve following recurrence using recursion tree:<br>$T(n) = T(n/4) + T(n/2) + cn^2$                                                                                           | <b>(04)</b> |
|            | <b>(c)</b> Solve following knapsack problem using Greedy method:<br>Number of items = 6. Max weight capacity, $W = 16$ .<br>Weight = {6, 10, 3, 5, 1, 3} and Value = {6, 2, 1, 8, 3, 5}. | <b>(07)</b> |
| <b>Q-4</b> | <b>(a)</b> Solve following Making Change problem using Dynamic Programming:<br>Amount = Rs. 7 and Denominations = Rs.1, Rs.2 and Rs.4                                                    | <b>(07)</b> |

- (b) Solve all pair shortest path problem for the following graph using Floyd-Warshall algorithm: (07)

- Q-5** (a) Write an algorithm for Quick sort. Also analyze it in best case running time. (07)  
(b) Explain Matrix Chain Multiplication with example. (07)
- Q-6** (a) Find Longest Common Subsequence using Dynamic Programming technique for the following sequences: (07)  
X = computer  
Y = calculator  
(b) Explain activity selection problem using greedy method with example. (07)
- Q-7** (a) What is the basic idea behind Rabin – Karp algorithm? What is expected running time of this algorithm? Explain it with example. (07)  
(b) What is the use of Kruskal’s algorithm? Explain it with example. (07)
- Q-8** (a) What is backtracking? Explain N-queen problem. Also give the solution for the 8-queen problem. (07)  
(b) Explain the concept of P, NP, NP-complete and NP-Hard problems with appropriate examples. (07)
