

# C.U.SHAH UNIVERSITY

## Winter Examination-2018

**Subject Name: Advanced Machine Design**

**Subject Code: 5TE01AMD1**

**Branch: M.Tech Mechanical (CAD/CAM)**

**Semester: 1**

**Date: 03/12/2018**

**Time: 02:30 To 05:30**

**Marks: 70**

**Instructions:**

- (1) Use of Programmable calculator and any other electronic instrument is prohibited.
- (2) Instructions written on main answer book are strictly to be obeyed.
- (3) Draw neat diagrams and figures (if necessary) at right places.
- (4) Assume suitable data if needed.

### SECTION – I

**Q-1 Attempt the Following questions.**

- |            |   |             |
|------------|---|-------------|
| <b>(a)</b> | Define mechanical reliability.                    | <b>(01)</b> |
| <b>(b)</b> | Which are the functions of spindle?               | <b>(02)</b> |
| <b>(c)</b> | Define Safe life and fail safe design strategies. | <b>(02)</b> |
| <b>(d)</b> | What is preloaded bearing?                        | <b>(02)</b> |

**Q-2 Attempt all questions**

- |            |  |             |
|------------|--|-------------|
| <b>(a)</b> | Explain design for strength and rigidity.  | <b>(07)</b> |
| <b>(b)</b> | The state of stress at a point is characterised by the components<br>$\sigma_x = 100 \text{ MPa}$ , $\sigma_y = -40 \text{ MPa}$ , $\sigma_z = 80 \text{ MPa}$ , $\tau_{xy} = \tau_{yz} = \tau_{zx} = 0$<br>Determine the extremum values of the shear stresses, their associated normal stresses, the octahedral shear stress and its associated normal stress. | <b>(07)</b> |

**OR**

**Q-2 Attempt all questions**

- |            |   |             |
|------------|---|-------------|
| <b>(a)</b> | State and explain the principles of design for assembly.  | <b>(07)</b> |
| <b>(b)</b> | A 70 mm diameter shaft is made of carbon steel having $\sigma_{ut} = 630 \text{ Mpa}$ , and $\sigma_y = 510 \text{ Mpa}$ . It is subjected to a torque between 2 kNm to 0.6 kNm. Using Soderburg method, find the factor of safety. Take $k_{sur} = 0.87$ , $k_{size} = 0.8$ , fatigue stress concentration factor $k_f = 1.1$ , $\sigma_e = 0.5 \sigma_{ut}$ , $\tau_e = 0.55 \sigma_e$ , $\tau_y = 0.55 \sigma_y$ . | <b>(07)</b> |

**Q-3 Attempt all questions**

- |            |  |             |
|------------|--|-------------|
| <b>(a)</b> | Enlist the different theories of friction. Explain Bowden-Tabor adhesion theory of friction.   | <b>(07)</b> |
| <b>(b)</b> | Discuss the effect of machine tool compliance on machining accuracy and the basic design Considerations for spindle design in detail with neat sketches. | <b>(07)</b> |

**OR**

**Q-3 Attempt all questions**

- |            |  |             |
|------------|--|-------------|
| <b>(a)</b> | What is profile correction of gears? Explain characteristics of corrected gears.   | <b>(07)</b> |
| <b>(b)</b> | Following Data refers to a journal bearing: Journal Diameter = 80 mm, Length of bearing = 100 mm, Bearing Load = 10 kN, Radial clearance = 0.04 mm, Absolute | <b>(07)</b> |

viscosity of oil =  $21 \times 10^{-3}$  PaS at  $70^\circ\text{C}$ , Room temp. =  $33^\circ\text{C}$ , Specific heat of oil =  $1760 \text{ J/kg } ^\circ\text{C}$ , Speed of the shaft =  $750 \text{ rpm}$ , Heat dissipation coefficient  $C_d = 350 \text{ w/m}^2 \text{ } ^\circ\text{C}$ . Find 1) Coefficient of friction, 2) Power lost in friction, 3) Minimum Oil film thickness.

## SECTION – II

**Q-4 Attempt the Following questions**

- (a) What do you understand by unit load and bulk load in material handling? (01)
- (b) What is Autofrettage? (02)
- (c) Define Optimum and Adequate design. (02)
- (d) Why multi- speed gear boxes are required in machine tools? (02)

**Q-5 Attempt all questions**

- (a) State and explain the different principles used for designing the material handling equipments in detail. (07)
- (b) Design an eight speed sliding gear box for a drill press for the following specifications: Minimum speed =  $80 \text{ rpm}$ ., Maximum speed =  $900 \text{ rpm}$ ., Motor power =  $7.5 \text{ kw}$  at  $1440 \text{ rpm}$ ., reduction through V- belt drive between motor and input shaft =  $1:2$ .  
Calculate: (1) Standard spindle speeds (2) Number of teeth on each gears.  
Also draw the structural diagram and speed chart.

**OR**

**Q-5 Attempt all questions**

- (a) Describe the procedure of Johnson’s method for optimum design with different forms of equations used. (07)
- (b) A steel disc of  $100 \text{ mm}$  internal and  $200 \text{ mm}$  external radius is shrunk on an another steel disc of  $20 \text{ mm}$  internal diameter. Determine the change in the shrink fit pressure produced by inertia forces at  $3600 \text{ rpm}$ . (07)

**Q-6 Attempt all questions**

- (a) What is the difference between stresses in thin and thick cylinders? When do you use Lamé’s equation for cylinder wall thickness? (07)
- (b) Explain the design of an E.O.T. crane main girder (box type) based on strength and rigidity in detail. (07)

**OR**

**Q-6 Attempt all Questions**

- (a) With a suitable example and explain the term “Robust Design”. Also explain Tools used in robust design. (07)
- (b) In light weight equipment, a shaft is transmitting a torque of  $900 \text{ Nm}$  and is to have a rigidity of  $90 \text{ Nm/degree}$ . Assume a factor of safety is  $1.5$  based on yield stress. Design the shaft with minimum weight. Assume maximum shear stress theory of failure. Use the following data for the materials: (07)

Material	Mass Density (kg/m <sup>3</sup> )	Yield Strength (MPa)	Shear Modulus (GPa)
M1	8500	130	80
M2	3000	50	26.7
M3	4800	90	40
M4	2100	20	16
